Summary

Final-year CS student (9.08 CGPA) with full-stack project experience across responsive frontend interfaces, backend APIs, and database-backed systems. Built Lore Engine, a production RAG platform with a Next.js frontend, FastAPI backend, and PostgreSQL/pgvector data layer serving 6,000+ wiki pages over REST APIs. Delivered StockXpert, a full-stack Next.js and FastAPI trading dashboard with live screening and alerts across 100 Nifty NSE equities. Shipping Stride end to end as Founder & Lead Engineer. Comfortable across the stack: HTML/CSS/JavaScript, React.js/Next.js, Node.js/FastAPI, SQL/NoSQL, REST APIs, and Git.

Education

•Bachelor of Technology in Computer Science *Nov 2022 – Jun 2026*
Pimpri Chinchwad College of Engineering, Savitribai Phule Pune University CGPA: 9.08 (up to 7th semester)

– Relevant Coursework: Machine Learning, Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks, Object-Oriented Programming

•Higher Secondary Certificate *Jun 2022*
Shri Mhalsakant Junior College, Maharashtra State Board Score: 89.17%

Experience

•Stride — AI-First Adaptive Wellness Platform *April 2026 – Present*
Founder & Lead Engineer Remote

– Architected and shipped Stride to production as sole engineer, owning the full stack — responsive frontend, backend APIs and business logic, and a database-backed data layer — running live with an early private user cohort driving iterative product feedback.
– Built REST APIs and business logic integrating third-party LLM providers via OpenRouter, with a deterministic four-component calculator (BMR/NEAT/EAT/TEF) separated from LLM reasoning to eliminate opaque arithmetic errors.
– Built natural-language workout parsing converting free text such as "30 min run, 3x10 squats at 60kg" into structured sets/reps/duration values, integrated with the frontend and backing database.
– Selected Convex for real-time reactive state over a REST + WebSockets stack, keeping frontend and backend in sync across concurrent agent types without manual polling logic.
– Debugged and optimized application performance end to end, iterating solo across frontend, backend, and data layer with no dedicated QA or ops support.

Engineering Projects

•Lore Engine — *RAG Platform for Fan Wiki Knowledge Bases* *May 2026 – Present*
Next.js, FastAPI, PostgreSQL, pgvector, BM25, Celery, Redis, Cloudflare R2, REST APIs

– Built a full-stack web application: a Next.js frontend consuming REST APIs served by a FastAPI backend, ingesting **6,000+ MediaWiki pages** per series into a hybrid retrieval pipeline (BM25 + pgvector via reciprocal rank fusion).
– Designed section-aware chunking at H2/H3 wiki boundaries with enriched `[Series][Page][Section]` metadata per chunk, demonstrating fine-grained context control over large knowledge bases.
– Built an async ingestion pipeline (Celery, Redis, Cloudflare R2) that fetches from the MediaWiki API, converts wikitext to markdown, and persists metadata in PostgreSQL via REST endpoints.
– Established a **50-question per-series ground-truth eval harness** measuring retrieval accuracy end to end, gating every deploy.

•StockXpert — *AI-Powered Deep Learning Equity Prediction Platform* *Jan 2026 – May 2026*
Python, TensorFlow, FastAPI, Next.js, TypeScript, Tailwind CSS, PostgreSQL, AWS

– Delivered a full-stack trading dashboard (Next.js frontend, FastAPI backend, REST APIs) with a live stock screener, real-time alerts, and OHLCV candlestick charts across all **100 Nifty NSE equities**.
– Constructed a leakage-free feature pipeline from raw OHLCV data with strict temporal train/validation/test splits to prevent lookahead bias, served through the backend to the frontend dashboard.
– Built the deep learning prediction layer (ResNet, GRU, Bi-LSTM, attention), achieving a **12% improvement in short-horizon return correlation** over baseline.
– Built a snapshot-first serving layer with market-aware TTL caching, delivering **sub-second API latency** across all 100 Nifty stocks during market hours.

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, C++, Java
Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS
Backend: FastAPI, Node.js, Express.js, REST APIs, BullMQ, Celery, Redis, WebSockets
Databases: PostgreSQL (+ pgvector), MongoDB, MySQL, Convex
Cloud & DevOps: AWS, Cloudflare R2, Git, GitHub, Agile/SDLC
AI / ML: TensorFlow, RAG Pipelines, Agentic Workflows, LLM Evaluation
