Summary

Final-year Computer Science student (9.08 CGPA) with end-to-end experience building full-stack software, backend APIs, data-backed systems, and asynchronous pipelines. Shipped Stride to production as sole engineer, built Lore Engine as a RAG platform over 6,000+ wiki pages, and developed PromptForge for agentic prompt benchmarking. Comfortable translating product requirements into maintainable services with Python, TypeScript, React.js, Next.js, FastAPI, Node.js, SQL, and Git.

Education

•Bachelor of Technology in Computer Science — *Nov 2022 – Jun 2026*
Pimpri Chinchwad College of Engineering, Savitribai Phule Pune University — CGPA: 9.08 (up to 7th semester)

– Relevant Coursework: Machine Learning, Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks, Object-Oriented Programming

•Higher Secondary Certificate — *Jun 2022*
Shri Mhalsakant Junior College, Maharashtra State Board — Score: 89.17%

Experience

•Stride — AI-First Adaptive Wellness Platform — *April 2026 – Present*
Founder & Lead Engineer — Remote

– Architected and shipped Stride to production as sole engineer; running live with an early private user cohort actively driving iterative product feedback ahead of public beta.
– Architected a six-layer AI-first system spanning multi-modal input capture, behavioral memory, natural-language extraction, five specialised domain agents, analytics, and adaptive UX.
– Separated LLM understanding from a deterministic four-component calculator (BMR, NEAT, EAT, TEF), eliminating opaque LLM arithmetic errors while retaining natural-language input.
– Built natural-language workout parsing that converts free text into structured sets, reps, duration, and MET values without rigid input templates.
– Selected Convex for real-time reactive state over REST + WebSockets, and OpenRouter for multi-provider LLM routing across five concurrent agent types.

Engineering Projects

•Lore Engine — *RAG Platform for Fan Wiki Knowledge Bases* — *May 2026 – Present*
Next.js, FastAPI, PostgreSQL, pgvector, BM25, Celery, Redis, Cloudflare R2, REST APIs

– Architected a full-stack RAG application ingesting **6,000+ MediaWiki pages** per series into a hybrid BM25 and pgvector retrieval pipeline via reciprocal rank fusion.
– Designed section-aware chunking at H2/H3 wiki boundaries with enriched `[Series][Page][Section]` metadata per chunk for fine-grained context control.
– Designed an async ingestion pipeline with Celery, Redis, and Cloudflare R2 that fetches MediaWiki pages, converts wikitext to structured markdown, and persists metadata in PostgreSQL.
– Established a **50-question per-series ground-truth eval harness** measuring retrieval MRR and end-to-end answer accuracy, gating every deploy.

•PromptForge — *Agentic Prompt Engineering & Benchmarking Platform* — *Jan 2026 – Feb 2026*
Node.js, Express.js, BullMQ, Convex, OpenRouter, React.js

– Architected a creator–critic–evaluator agentic pipeline for iterative prompt improvement, scoring clarity, completeness, constraint coverage, and token efficiency across versioned revision trails.
– Implemented cross-model routing and benchmarking across OpenAI, Anthropic, Gemini, and open-source models via OpenRouter for objective quality, latency, and cost-per-output comparisons.
– Built a fault-tolerant async backend using BullMQ workers with idempotent retries and Convex persistence for reliable prompt regression testing at scale.
– Emitted structured prompt outputs with metadata including token budget, latency profile, expected output shape, and version changelog.

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, C++, Java
Frontend: React.js, Next.js, Tailwind CSS, HTML, CSS
Backend: FastAPI, Node.js, Express.js, BullMQ, Celery, Redis, REST APIs, WebSockets
Databases: PostgreSQL (+ pgvector), MongoDB, Convex
Cloud & DevOps: AWS, Cloudflare R2, Git, GitHub, Agile/SDLC
AI / ML: TensorFlow, RAG Pipelines, LLM Evaluation, Agentic Workflows, OpenRouter
