Summary

Final-year CS student (9.08 CGPA) specialising in generative AI, agentic frameworks, and RAG architectures with end-to-end production ownership. Shipped Stride (5–10 active users) — a six-layer multi-agent platform with five domain agents sharing behavioral memory, tool calling, and multi-provider LLM routing — demonstrating real-world memory management and agent coordination. Built Lore Engine, a production RAG platform with hybrid BM25 + pgvector retrieval, deploy-gated evaluation, and spoiler-aware context filtering over 6,000+ pages. Built PromptForge, a creator–critic–evaluator pipeline with cross-model benchmarking and context-optimised token management. Strong in Python, RAG, agentic AI, vector databases, prompt engineering, and AWS.

Education

•Bachelor of Technology in Computer Science *Nov 2022 – Jun 2026*
Pimpri Chinchwad College of Engineering, Savitribai Phule Pune University CGPA: 9.08 (up to 7th semester)

– Relevant Coursework: Machine Learning, Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks, Object-Oriented Programming

Experience

•Stride — AI-First Adaptive Wellness Platform *April 2026 – Present*
Founder & Lead Engineer Remote

– Built and shipped Stride to production as sole engineer; running live with **5–10 active trial users** driving iterative product feedback.
– Designed five autonomous domain agents with tool calling and a shared behavioral memory layer tracking preferences across sessions — demonstrating stateful memory management in agentic systems at production scale.
– Integrated multi-provider LLM routing via OpenRouter across Anthropic Claude, OpenAI GPT, and Gemini, enabling dynamic model selection and context-optimised routing to reduce token usage per agent type.

Engineering Projects

•Lore Engine — *Production RAG Platform with Precision Context Management* *2026 – Present*
Next.js, FastAPI, PostgreSQL, pgvector, BM25, Celery, Redis, Cloudflare R2, OpenAI, Anthropic Claude

– Architected a full-stack RAG application ingesting **6,000+ MediaWiki pages** into a hybrid pipeline (BM25 + pgvector via reciprocal rank fusion) — chosen over pure vector search for superior exact-entity retrieval, mirroring enterprise GenAI precision requirements.
– Designed per-chunk spoiler-filtering metadata assigned at ingestion and applied at retrieval time — fine-grained context management preventing unwanted information surfacing, analogous to access-controlled enterprise RAG.
– Established a **50-question per-series eval harness** measuring retrieval MRR and end-to-end answer accuracy, gating every deployment — the evaluation-in-the-loop discipline required in production GenAI systems.
– Scaled to **∼5M vectors per series** using pgvector over dedicated stores (Pinecone/Weaviate), eliminating infrastructure complexity and keeping retrieval in one network hop.

•PromptForge — *Creator–Critic–Evaluator Agentic Pipeline with Cross-Model Benchmarking* *Jan 2026 – Feb 2026*
Node.js, Express.js, BullMQ, Convex, OpenRouter, React.js

– Architected a creator–critic–evaluator agentic pipeline with tool calling for iterative prompt improvement, scoring clarity, completeness, constraint coverage, and token efficiency across versioned revision trails.
– Implemented cross-model LLM routing across OpenAI, Anthropic, Gemini, and open-source models via OpenRouter for quality, latency, and cost-per-output benchmarking with context-optimised model selection.
– Built a fault-tolerant async backend (BullMQ workers, idempotent retries, Convex persistence) and emitted structured outputs with token budget, latency profile, and version changelog — prompts deployed like code.

Technical Skills

AI / ML: Generative AI, Agentic Frameworks, RAG Pipelines, Tool Calling, Behavioral Memory, pgvector, BM25, Reciprocal Rank Fusion, Prompt Engineering, LLM Evaluation, Multi-Agent Systems, OpenRouter
LLM Providers: Anthropic Claude, OpenAI GPT, Gemini, Groq, Deepgram Nova-2
Languages: Python, TypeScript, JavaScript, SQL, C++, Java
Backend: FastAPI, Node.js, Express.js, BullMQ, Celery, Redis, REST APIs, WebSockets
Frontend: React.js, Next.js, Tailwind CSS, HTML, CSS
Databases: PostgreSQL (+ pgvector), MongoDB, Convex
Cloud & DevOps: AWS, Cloudflare R2, Git, GitHub, async job pipelines
System Design: Agentic coordination, hybrid retrieval, memory management, context optimization, event-driven architecture
