Summary

Final-year Computer Science student (9.08 CGPA) with end-to-end software engineering experience across production AI systems, backend APIs, full-stack applications, and data pipelines. Shipped Stride to production as sole engineer with an early private user cohort. Built Lore Engine, a full-stack RAG platform with hybrid retrieval over 6,000+ wiki pages and deploy-gated evaluation. Designed StockXpert, a hierarchical deep learning system with a leakage-free feature pipeline across 100 Nifty NSE equities. Proficient in Python, TypeScript, React, Next.js, FastAPI, Node.js, PostgreSQL, TensorFlow, and cloud-backed async systems.

Education

•Bachelor of Technology in Computer Science *Nov 2022 – Jun 2026*
Pimpri Chinchwad College of Engineering, Savitribai Phule Pune University CGPA: 9.08 (up to 7th semester)

– Relevant Coursework: Machine Learning, Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks, Object-Oriented Programming

•Higher Secondary Certificate *Jun 2022*
Shri Mhalsakant Junior College, Maharashtra State Board Score: 89.17%

Experience

•Stride — AI-First Adaptive Wellness Platform *April 2026 – Present*
Founder & Lead Engineer Remote

– Architected and shipped Stride to production as sole engineer, owning the full stack and running live with an early private user cohort driving iterative product feedback.
– Built REST APIs and business logic integrating third-party LLM providers via OpenRouter, with a deterministic four-component calculator (BMR/NEAT/EAT/TEF) separated from LLM reasoning to eliminate opaque arithmetic errors.
– Built natural-language workout parsing that converts free text such as "30 min run, 3x10 squats at 60kg" into structured sets, reps, duration, and MET values.
– Selected Convex for real-time reactive state over a REST + WebSockets stack, keeping frontend and backend in sync across concurrent agent types without manual polling logic.

Engineering Projects

•Lore Engine — *RAG Platform for Fan Wiki Knowledge Bases* *May 2026 – Present*
Next.js, FastAPI, PostgreSQL, pgvector, BM25, Celery, Redis, Cloudflare R2, REST APIs

– Built a full-stack web application with a Next.js frontend and FastAPI backend, ingesting **6,000+ MediaWiki pages** per series into hybrid BM25 and pgvector retrieval via reciprocal rank fusion.
– Designed section-aware chunking at H2/H3 wiki boundaries with enriched `[Series][Page][Section]` metadata per chunk for fine-grained context control.
– Built an async ingestion pipeline with Celery, Redis, and Cloudflare R2 that fetches MediaWiki pages, converts wikitext to structured markdown, and persists metadata in PostgreSQL.
– Established a **50-question per-series ground-truth eval harness** measuring retrieval accuracy end to end and gating every deploy.

•StockXpert — *AI-Powered Deep Learning Equity Prediction Platform* *Jan 2026 – May 2026*
Python, TensorFlow, FastAPI, Next.js, TypeScript, Tailwind CSS, Cloudflare R2, AWS

– Delivered a full-stack trading dashboard with Next.js, FastAPI, REST APIs, live stock screening, real-time alerts, and OHLCV candlestick charts across all **100 Nifty NSE equities**.
– Constructed a leakage-free feature pipeline from raw OHLCV data with strict temporal train, validation, and test splits to prevent lookahead bias.
– Built the deep learning prediction layer with ResNet, GRU, Bi-LSTM, and multi-head attention, achieving a **12% improvement in short-horizon return correlation** over baseline.

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, C++, Java
Frontend: React.js, Next.js, Tailwind CSS, HTML, CSS
Backend: FastAPI, Node.js, Express.js, REST APIs, BullMQ, Celery, Redis, WebSockets
Databases: PostgreSQL (+ pgvector), MongoDB, Convex
Cloud & DevOps: AWS, Cloudflare R2, Git, GitHub
AI / ML: TensorFlow, RAG Pipelines, pgvector, BM25, LLM Evaluation, Agentic Workflows
