Summary

Final-year Computer Science student (9.08 CGPA) with end-to-end software engineering experience across production applications, backend APIs, database-backed systems, and full-stack development. Shipped Stride as sole engineer with a live private user cohort, building REST APIs, business logic, and real-time application state. Built Lore Engine, a full-stack RAG platform with asynchronous ingestion, PostgreSQL/pgvector retrieval, and deploy-gated evaluation. Built PromptForge, an agentic prompt-engineering platform with cross-model benchmarking and fault-tolerant workers. Proficient in Python, TypeScript, React.js, Next.js, FastAPI, Node.js, SQL, cloud storage, and Git.

Education

•Bachelor of Technology in Computer Science *Nov 2022 – Jun 2026*
Pimpri Chinchwad College of Engineering, Savitribai Phule Pune University CGPA: 9.08 (up to 7th semester)

- Relevant Coursework: Machine Learning, Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks, Object-Oriented Programming

•Higher Secondary Certificate *Jun 2022*
Shri Mhalsakant Junior College, Maharashtra State Board Score: 89.17%

Experience

•Stride — AI-First Adaptive Wellness Platform *April 2026 – Present*
Founder & Lead Engineer Remote

- Architected and shipped Stride to production as sole engineer, owning the full stack: responsive frontend, backend APIs and business logic, and a database-backed data layer. The product runs live with an early private user cohort driving iterative feedback.
- Built REST APIs and business logic integrating third-party LLM providers via OpenRouter, separating a deterministic four-component calculator (BMR/NEAT/EAT/TEF) from LLM reasoning to eliminate opaque arithmetic errors.
- Built natural-language workout parsing that converts free text such as "30 min run, 3x10 squats at 60kg" into structured sets, reps, and duration values integrated with the frontend and backing database.
- Selected Convex for real-time reactive state over a REST + WebSockets stack, keeping frontend and backend in sync across concurrent agent types without manual polling logic.
- Debugged and optimized application performance end to end, iterating across frontend, backend, and data layers with no dedicated QA or operations support.

Engineering Projects

•Lore Engine — *RAG Platform for Fan Wiki Knowledge Bases* *May 2026 – Present*
Next.js, FastAPI, PostgreSQL, pgvector, BM25, Celery, Redis, Cloudflare R2, REST APIs

- Built a full-stack web application with a Next.js frontend consuming REST APIs from a FastAPI backend, ingesting **6,000+ MediaWiki pages** per series into hybrid BM25 and pgvector retrieval.
- Designed section-aware chunking at H2/H3 wiki boundaries with enriched `[Series][Page][Section]` metadata per chunk for fine-grained context control over large knowledge bases.
- Built an asynchronous ingestion pipeline with Celery, Redis, and Cloudflare R2 that fetches MediaWiki pages, converts wikitext to markdown, and persists metadata in PostgreSQL through REST endpoints.
- Established a **50-question per-series ground-truth evaluation harness** measuring retrieval accuracy end to end and gating every deploy.

•PromptForge — *Agentic Prompt Engineering & Benchmarking Platform* *Jan 2026 – Feb 2026*
Node.js, Express.js, BullMQ, Convex, OpenRouter, React.js

- Architected a creator, critic, and evaluator agentic pipeline for iterative prompt improvement across versioned revision trails, treating prompts as testable, regression-tracked artifacts.
- Implemented cross-model routing and benchmarking across OpenAI, Anthropic, Gemini, and open-source models via OpenRouter for objective quality, latency, and cost-per-output comparisons.
- Built a fault-tolerant asynchronous backend using BullMQ workers with idempotent retries and Convex persistence, supporting reliable prompt regression testing without job loss on provider timeouts.
- Emitted structured prompt outputs with token budget, latency profile, expected output shape, and version changelog metadata so prompts could be reviewed and deployed like code.

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, C++, Java
Frontend: React.js, Next.js, Tailwind CSS, HTML, CSS, Electron
Backend: FastAPI, Node.js, Express.js, BullMQ, Celery, Redis, REST APIs, WebSockets
Databases: PostgreSQL (+ pgvector), MongoDB, Convex
Cloud & DevOps: AWS, Cloudflare R2, Git, GitHub, Agile/SDLC
AI / ML: TensorFlow, RAG Pipelines, pgvector, BM25, LLM Evaluation, Agentic Workflows, OpenRouter
