Summary

Final-year CS student (9.08 CGPA) building conversational AI systems, RAG knowledge bases, and voice-enabled LLM applications at production scale. Shipped Stride to production (5–10 active users) with voice input, natural-language understanding, and five domain agents delivering contextually personalised responses — architecture directly applicable to AI tutoring and educational assistants. Built Lore Engine, a production RAG platform with hybrid retrieval over 6,000+ pages and a streaming chat interface with inline citations. Built PromptForge for systematic prompt engineering and cross-model evaluation. Strong in Python, LLMs, prompt engineering, OpenAI APIs, RAG, and conversational AI.

Education

•Bachelor of Technology in Computer Science *Nov 2022 – Jun 2026*
Pimpri Chinchwad College of Engineering, Savitribai Phule Pune University CGPA: 9.08 (up to 7th semester)

– Relevant Coursework: Machine Learning, Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks, Object-Oriented Programming

Experience

•Stride — AI-First Adaptive Wellness Platform *April 2026 – Present*
Founder & Lead Engineer Remote

– Built and shipped Stride to production as sole engineer; running live with **5–10 active trial users** driving iterative product feedback.
– Integrated voice input via Deepgram Nova-2 and whisper.cpp, processed through an NLU extraction layer converting free-text input (e.g. "30 min run, 3x10 squats") into structured data — demonstrating voice AI and conversational AI pipeline design.
– Built five specialised domain agents (diet, workout, sleep, hydration, habits) sharing a behavioral memory layer, delivering personalised, context-aware responses adapted to each user over time.

Engineering Projects

•Lore Engine — *RAG Knowledge-Base Platform with Streaming Chat Interface* *2026 – Present*
Next.js, FastAPI, PostgreSQL, pgvector, BM25, Celery, Redis, Cloudflare R2, OpenAI, Anthropic Claude

– Architected a full-stack RAG application ingesting **6,000+ MediaWiki pages** into a hybrid retrieval pipeline (BM25 + pgvector via reciprocal rank fusion), enabling precise contextual Q&A over large knowledge bases — directly analogous to AI tutoring and educational knowledge retrieval systems.
– Designed per-chunk spoiler-filtering metadata assigned at ingestion and applied at retrieval time, demonstrating personalised information delivery — the same technique applicable to curriculum-aware educational AI.
– Shipped a streaming chat interface with inline citations, enabling interactive Q&A over structured knowledge with explainable source attribution — directly applicable to intelligent tutoring systems.
– Established a **50-question per-series ground-truth eval harness** measuring retrieval MRR and end-to-end answer accuracy, gating every deployment; validated on ∼6,000 pages.

•PromptForge — *Agentic Prompt Engineering & Cross-Model Evaluation Platform* *Jan 2026 – Feb 2026*
Node.js, Express.js, BullMQ, Convex, OpenRouter, React.js

– Architected a creator–critic–evaluator agentic pipeline for iterative prompt improvement, scoring clarity, completeness, constraint coverage, and token efficiency across versioned revision trails.
– Implemented cross-model routing across OpenAI, Anthropic, Gemini, and open-source models via OpenRouter, enabling objective quality, latency, and cost comparisons for model selection.
– Built a fault-tolerant async backend (BullMQ workers, idempotent retries, Convex persistence) sustaining reliable prompt regression testing without job loss on LLM provider timeouts.

Technical Skills

AI / ML: LLMs, Conversational AI, RAG Pipelines, Prompt Engineering, pgvector, BM25, NLP, Embeddings, Agentic Workflows, Behavioral Memory, Voice AI, LLM Evaluation, OpenRouter
LLM Providers: OpenAI GPT, Anthropic Claude, Gemini, Groq, Deepgram Nova-2, whisper.cpp (local)
Languages: Python, TypeScript, JavaScript, SQL, C++, Java
Backend: FastAPI, Node.js, Express.js, BullMQ, Celery, Redis, REST APIs, WebSockets
Frontend: React.js, Next.js, Tailwind CSS, HTML, CSS
Databases: PostgreSQL (+ pgvector), MongoDB, Convex
Cloud & DevOps: AWS, Cloudflare R2, Git, GitHub, async job pipelines
System Design: Conversational AI pipelines, hybrid retrieval, multi-agent coordination, event-driven architecture
