Summary

Final-year Computer Science student (9.08 CGPA) building applied AI systems across agentic workflows, retrieval, evaluation, and full-stack delivery. Architected PromptForge, an agentic prompt-engineering pipeline with cross-model benchmarking, fault-tolerant workers, and versioned outputs. Built Lore Engine, a production RAG platform with hybrid BM25 and pgvector retrieval over 6,000+ wiki pages and deploy-gated evaluation. Shipping Stride as Founder & Lead Engineer, with multi-modal input, behavioral memory, and five specialised domain agents. Proficient in Python, TypeScript, FastAPI, React, Next.js, RAG architectures, LLM evaluation, and agentic workflows.

Education

•Bachelor of Technology in Computer Science *Nov 2022 – Jun 2026*
Pimpri Chinchwad College of Engineering, Savitribai Phule Pune University CGPA: 9.08 (up to 7th semester)
– Relevant Coursework: Machine Learning, Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks, Object-Oriented Programming

•Higher Secondary Certificate *Jun 2022*
Shri Mhalsakant Junior College, Maharashtra State Board Score: 89.17%

Experience

•Stride — AI-First Adaptive Wellness Platform *April 2026 – Present*
Founder & Lead Engineer Remote
– Architected and shipped Stride to production as sole engineer, running live with an early private user cohort actively driving iterative product feedback ahead of public beta.
– Architected a six-layer AI-first system with multi-modal input capture, behavioral memory, natural-language extraction, five specialised domain agents, analytics, and adaptive UX.
– Separated LLM understanding and intent extraction from a deterministic four-component calculator (BMR, NEAT, EAT, TEF), eliminating opaque LLM arithmetic errors.
– Built natural-language workout parsing that converts free text into structured sets, reps, duration, and MET values without rigid input templates.
– Selected Convex for real-time reactive state and OpenRouter for multi-provider LLM routing across five concurrent agent types.

Engineering Projects

•PromptForge — *Agentic Prompt Engineering & Benchmarking Platform* *Jan 2026 – Feb 2026*
Node.js, Express.js, BullMQ, Convex, OpenRouter, React.js
– Architected a creator, critic, and evaluator agentic pipeline for iterative prompt improvement across versioned revision trails.
– Implemented cross-model routing and benchmarking across OpenAI, Anthropic, Gemini, and open-source models via OpenRouter for quality, latency, and cost comparisons.
– Built a fault-tolerant async backend using BullMQ workers with idempotent retries and Convex persistence for prompt regression testing during provider timeouts.
– Emitted structured prompt outputs with token budgets, latency profiles, expected output shapes, and version changelogs.

•Lore Engine — *RAG Platform for Fan Wiki Knowledge Bases* *May 2026 – Present*
Next.js, FastAPI, PostgreSQL, pgvector, BM25, Celery, Redis, Cloudflare R2, OpenAI, Anthropic Claude
– Architected a full-stack RAG application ingesting **6,000+ MediaWiki pages** per series into hybrid BM25 and pgvector retrieval via reciprocal rank fusion.
– Designed section-aware H2/H3 chunking with enriched metadata and spoiler tags assigned at ingestion and filtered at retrieval.
– Designed an async ingestion pipeline using Celery, Redis, and Cloudflare R2/S3 to fetch, transform, store, and persist wiki data.
– Established a **50-question per-series ground-truth eval harness** measuring retrieval MRR and end-to-end answer accuracy, gating every deploy.

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, C++, Java
Frontend: React.js, Next.js, Tailwind CSS, HTML, CSS
Backend: FastAPI, Node.js, Express.js, BullMQ, Celery, Redis, REST APIs, WebSockets
AI / ML: RAG Pipelines, pgvector, BM25, Reciprocal Rank Fusion, LLM Evaluation, Agentic Workflows, Behavioral Memory, Multi-modal AI, Hallucination Detection, TensorFlow, OpenRouter
LLM Providers: Anthropic Claude, OpenAI GPT, Gemini, Groq, Deepgram Nova-2, whisper.cpp (local)
Databases: PostgreSQL (+ pgvector), MongoDB, Convex
Cloud & DevOps: AWS, Cloudflare R2, Git, GitHub
