Summary

Final-year Computer Science student (9.08 CGPA) with end-to-end full-stack engineering experience across frontend interfaces, backend APIs, and database-backed systems. Shipped Stride to production as sole engineer. Built Lore Engine, a full-stack RAG application with Next.js, FastAPI, PostgreSQL, and hybrid retrieval over 6,000+ wiki pages. Delivered StockXpert, a Next.js and FastAPI trading dashboard with live screening and alerts across 100 Nifty NSE equities. Comfortable with Python, TypeScript, JavaScript, React.js, REST APIs, SQL, and Git.

Education

•Bachelor of Technology in Computer Science *Nov 2022 – Jun 2026*
Pimpri Chinchwad College of Engineering, Savitribai Phule Pune University CGPA: 9.08 (up to 7th semester)

- Relevant Coursework: Machine Learning, Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks, Object-Oriented Programming

•Higher Secondary Certificate *Jun 2022*
Shri Mhalsakant Junior College, Maharashtra State Board Score: 89.17%

Experience

•Stride — AI-First Adaptive Wellness Platform *April 2026 – Present*
Founder & Lead Engineer Remote

- Architected and shipped Stride to production as sole engineer; running live with an early private user cohort actively driving iterative product feedback ahead of public beta.
- Architected a six-layer AI-first system with multi-modal input, behavioral memory, structured extraction, five specialised domain agents, analytics, and adaptive UX.
- Separated LLM understanding from a deterministic four-component calculator (BMR, NEAT, EAT, TEF), eliminating opaque arithmetic errors while retaining natural-language input.
- Built natural-language workout parsing that converts free text such as "30 min run, 3x10 squats at 60kg" into structured sets, reps, duration, and MET values.
- Selected Convex for real-time state over REST + WebSockets, and OpenRouter for multi-provider LLM routing across five concurrent agent types.

Engineering Projects

•Lore Engine — *RAG Platform for Fan Wiki Knowledge Bases* *May 2026 – Present*
Next.js, FastAPI, PostgreSQL, pgvector, BM25, Celery, Redis, Cloudflare R2, REST APIs

- Architected a full-stack RAG application ingesting **6,000+ MediaWiki pages** per series into hybrid BM25 and pgvector retrieval via reciprocal rank fusion (RRF).
- Designed section-aware H2/H3 chunking with enriched `[Series][Page][Section]` metadata for fine-grained context control.
- Designed an async Celery, Redis, and Cloudflare R2 pipeline that fetches MediaWiki pages, converts wikitext to markdown, and persists metadata in PostgreSQL.
- Established a **50-question per-series ground-truth eval harness** measuring retrieval MRR and end-to-end answer accuracy, gating every deploy.

•StockXpert — *AI-Powered Deep Learning Equity Prediction Platform* *Jan 2026 – May 2026*
Python, TensorFlow, FastAPI, Next.js, TypeScript, Tailwind CSS, Cloudflare R2, AWS

- Constructed a leakage-free OHLCV feature pipeline with strict temporal train/validation/test splits to prevent lookahead bias.
- Designed a multi-objective Huber loss with directional regularisation and tail-event oversampling, achieving a **12% improvement in short-horizon return correlation** over baseline.
- Built a snapshot-first serving layer on Cloudflare R2 with market-aware TTL caching, delivering **sub-second API latency across all 100 Nifty stocks**.
- Delivered a full-stack trading dashboard (Next.js + FastAPI) with a live screener, real-time alerts, OHLCV charts, and forecast tables.

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, C++, Java
Frontend: React.js, Next.js, Tailwind CSS, HTML, CSS
Backend: FastAPI, Node.js, Express.js, REST APIs, BullMQ, Celery, Redis, WebSockets
Databases: PostgreSQL (+ pgvector), MongoDB, Convex
Cloud & DevOps: AWS, Cloudflare R2, Git, GitHub
AI / ML: TensorFlow, RAG Pipelines, pgvector, BM25, Reciprocal Rank Fusion, Agentic Workflows, LLM Evaluation
