Summary

Final-year Computer Science student (9.08 CGPA) building full-stack software and AI systems. Shipped Stride to production as sole engineer, and built Lore Engine, a RAG platform with hybrid retrieval, async ingestion, and deploy-gated evaluation. Built PromptForge, an agentic prompt-engineering pipeline with cross-model benchmarking and reliable background workers. Proficient in Python, TypeScript, React, Next.js, FastAPI, Node.js, LLM evaluation, RAG architectures, and agentic workflows.

Education

•Bachelor of Technology in Computer Science *Nov 2022 – Jun 2026*
Pimpri Chinchwad College of Engineering, Savitribai Phule Pune University CGPA: 9.08 (up to 7th semester)

– Relevant Coursework: Machine Learning, Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks, Object-Oriented Programming

•Higher Secondary Certificate *Jun 2022*
Shri Mhalsakant Junior College, Maharashtra State Board Score: 89.17%

Experience

•Stride — AI-First Adaptive Wellness Platform *April 2026 – Present*
Founder & Lead Engineer Remote

– Architected and shipped Stride to production as sole engineer, running live with an early private user cohort and iterative product feedback.
– Built REST APIs and business logic integrating third-party LLM providers via OpenRouter, separating deterministic BMR, NEAT, EAT, and TEF calculations from LLM reasoning.
– Built natural-language workout parsing that converts free text into structured sets, reps, duration, and MET values without rigid input templates.
– Selected Convex for real-time reactive state over REST + WebSockets, keeping frontend and backend in sync across concurrent agent types without manual polling.
– Debugged and optimized application performance end to end across frontend, backend, and data layers with no dedicated QA or ops support.

Engineering Projects

•Lore Engine — *RAG Platform for Fan Wiki Knowledge Bases* *May 2026 – Present*
Next.js, FastAPI, PostgreSQL, pgvector, BM25, Celery, Redis, Cloudflare R2, REST APIs

– Built a full-stack web application with a Next.js frontend and FastAPI backend, ingesting 6,000+ MediaWiki pages into a hybrid BM25 and pgvector retrieval pipeline.
– Designed section-aware chunking at H2/H3 wiki boundaries with enriched [Series][Page][Section] metadata for fine-grained context control over large knowledge bases.
– Built an async ingestion pipeline with Celery, Redis, and Cloudflare R2 that fetches MediaWiki content, converts wikitext to markdown, and persists metadata in PostgreSQL.
– Established a 50-question per-series ground-truth evaluation harness measuring retrieval accuracy end to end and gating every deploy.

•PromptForge — *Agentic Prompt Engineering & Benchmarking Platform* *Jan 2026 – Feb 2026*
Node.js, Express.js, BullMQ, Convex, OpenRouter, React.js

– Architected a creator, critic, and evaluator agentic pipeline for iterative prompt improvement across versioned revision trails.
– Implemented cross-model routing and benchmarking across OpenAI, Anthropic, Gemini, and open-source models via OpenRouter, comparing quality, latency, and cost per output.
– Built a fault-tolerant async backend using BullMQ workers with idempotent retries and Convex persistence for prompt regression testing without job loss on provider timeouts.
– Emitted structured prompt outputs with token budget, latency profile, expected output shape, and version changelog metadata for review and deployment like code.

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, C++, Java
Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS
Backend: FastAPI, Node.js, Express.js, REST APIs, BullMQ, Celery, Redis, WebSockets
Databases: PostgreSQL (+ pgvector), MongoDB, MySQL, Convex
Cloud & DevOps: AWS, Cloudflare R2, Git, GitHub, Agile/SDLC
AI / ML: TensorFlow, RAG Pipelines, Agentic Workflows, LLM Evaluation, OpenRouter
