Summary

Final-year Computer Science student (9.08 CGPA) with end-to-end ownership across production software systems, backend services, and full-stack product engineering. Shipped Stride to production as sole engineer with an early private user cohort. Built Lore Engine, a full-stack RAG platform ingesting 6,000+ wiki pages through hybrid retrieval, asynchronous workers, and deploy-gated evaluation. Architected PromptForge, an agentic prompt-engineering platform with cross-model benchmarking, fault-tolerant workers, and versioned outputs. Proficient in Python, TypeScript, JavaScript, React, Next.js, FastAPI, Node.js, PostgreSQL, and asynchronous systems.

Education

•Bachelor of Technology in Computer Science *Nov 2022 – Jun 2026*
Pimpri Chinchwad College of Engineering, Savitribai Phule Pune University CGPA: 9.08 (up to 7th semester)

– Relevant Coursework: Machine Learning, Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks, Object-Oriented Programming

•Higher Secondary Certificate *Jun 2022*
Shri Mhalsakant Junior College, Maharashtra State Board Score: 89.17%

Experience

•Stride — AI-First Adaptive Wellness Platform *April 2026 – Present*
Founder & Lead Engineer Remote

– Architected and shipped Stride to production as sole engineer, running live with an early private user cohort actively driving iterative product feedback ahead of public beta.
– Architected a six-layer AI-first system spanning multi-modal input capture, behavioral memory, structured extraction, five specialised domain agents, analytics, and adaptive UX.
– Separated LLM understanding from a deterministic four-component calculator (BMR, NEAT, EAT, TEF) to eliminate opaque LLM arithmetic errors while retaining natural-language input.
– Built natural-language workout parsing that converts free text such as "30 min run, 3x10 squats at 60kg" into structured sets, reps, duration, and MET values without rigid input templates.
– Selected Convex for real-time reactive state over REST + WebSockets, and OpenRouter for multi-provider LLM routing across five concurrent agent types.

Engineering Projects

•Lore Engine — *RAG Platform for Fan Wiki Knowledge Bases* *May 2026 – Present*
Next.js, FastAPI, PostgreSQL, pgvector, BM25, Celery, Redis, Cloudflare R2

– Architected a full-stack RAG application ingesting **6,000+ MediaWiki pages** per series into hybrid BM25 and pgvector retrieval via reciprocal rank fusion.
– Designed section-aware chunking at H2/H3 wiki boundaries with enriched `[Series][Page][Section]` metadata and first-appearance spoiler tags filtered at retrieval time.
– Designed an async ingestion pipeline using Celery workers, Redis, Cloudflare R2/S3, and PostgreSQL to fetch, transform, store, and index MediaWiki content.
– Established a **50-question per-series ground-truth eval harness** measuring retrieval MRR and end-to-end answer accuracy, gating every deploy.

•PromptForge — *Agentic Prompt Engineering & Benchmarking Platform* *Jan 2026 – Feb 2026*
Node.js, Express.js, BullMQ, Convex, OpenRouter, React.js

– Architected a creator, critic, and evaluator agentic pipeline for iterative prompt improvement across versioned revision trails.
– Implemented cross-model routing and benchmarking across OpenAI, Anthropic, Gemini, and open-source models via OpenRouter for quality, latency, and cost comparisons.
– Built a fault-tolerant async backend using BullMQ workers with idempotent retries and Convex persistence, supporting prompt regression testing without job loss on provider timeouts.
– Emitted structured prompt outputs with metadata including token budget, latency profile, expected output shape, and version changelog.

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, C++, Objective-C, Java
Frontend: React.js, Next.js, Tailwind CSS, HTML, CSS, Electron
Backend: FastAPI, Node.js, Express.js, BullMQ, Celery, Redis, REST APIs, WebSockets
Databases: PostgreSQL (+ pgvector), MongoDB, Convex
Cloud & DevOps: AWS, Cloudflare R2, Git, GitHub
AI / ML: TensorFlow, RAG Pipelines, pgvector, BM25, Reciprocal Rank Fusion, LLM Evaluation, Agentic Workflows, OpenRouter
