Summary

Final-year Computer Science student (9.08 CGPA) with hands-on experience building AI systems, agentic workflows, and full-stack products. Shipped Stride to production as sole engineer with five specialised domain agents and multi-modal input. Architected Lore Engine, a RAG platform with hybrid BM25 and pgvector retrieval over 6,000+ wiki pages, and PromptForge, an agentic prompt-engineering pipeline with cross-model benchmarking. Proficient in Python, TypeScript, FastAPI, TensorFlow, LLM evaluation, RAG pipelines, and agentic workflows.

Education

•Bachelor of Technology in Computer Science *Nov 2022 – Jun 2026*
Pimpri Chinchwad College of Engineering, Savitribai Phule Pune University CGPA: 9.08 (up to 7th semester)

– Relevant Coursework: Machine Learning, Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks, Object-Oriented Programming

•Higher Secondary Certificate *Jun 2022*
Shri Mhalsakant Junior College, Maharashtra State Board Score: 89.17%

Experience

•Stride — AI-First Adaptive Wellness Platform *April 2026 – Present*
Founder & Lead Engineer Remote

– Architected and shipped Stride to production as sole engineer, running live with an early private user cohort actively driving iterative product feedback ahead of public beta.
– Designed a six-layer AI-first system spanning multi-modal input capture, behavioral memory, NLU, five specialised domain agents, analytics, and adaptive UX driven by behavioral signals.
– Separated LLM understanding from computation with a deterministic four-component calculator for BMR, NEAT, EAT, and TEF, eliminating opaque LLM arithmetic errors.
– Built natural-language workout parsing that converts free text into structured sets, reps, duration, and MET values without rigid input templates.
– Selected Convex for real-time reactive state and OpenRouter for multi-provider LLM routing across five concurrent agent types.

Engineering Projects

•Lore Engine — *RAG Platform for Fan Wiki Knowledge Bases* *May 2026 – Present*
Next.js, FastAPI, PostgreSQL, pgvector, BM25, Celery, Redis, Cloudflare R2

– Architected a full-stack RAG application ingesting **6,000+ MediaWiki pages** per series into hybrid BM25 and pgvector retrieval via reciprocal rank fusion for exact character-name matching.
– Designed section-aware H2/H3 chunking with enriched `[Series][Page][Section]` metadata and spoiler tags filtered at retrieval time.
– Designed an async ingestion pipeline using Celery, Redis, and Cloudflare R2/S3 to fetch MediaWiki pages, convert wikitext, and persist metadata in PostgreSQL.
– Established a **50-question per-series ground-truth eval harness** measuring retrieval MRR and end-to-end answer accuracy, gating every deploy.

•PromptForge — *Agentic Prompt Engineering & Benchmarking Platform* *Jan 2026 – Feb 2026*
Node.js, Express.js, BullMQ, Convex, OpenRouter, React.js

– Architected a creator–critic–evaluator agentic pipeline for iterative prompt improvement across versioned revision trails.
– Implemented cross-model routing and benchmarking across OpenAI, Anthropic, Gemini, and open-source models via OpenRouter.
– Built a fault-tolerant async backend using BullMQ workers with idempotent retries and Convex persistence for prompt regression testing.
– Emitted structured prompt outputs with token budget, latency profile, expected output shape, and version changelog metadata.

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, C++, Objective-C, Java
Frontend: React.js, Next.js, Tailwind CSS, HTML, CSS, Electron
Backend: FastAPI, Node.js, Express.js, BullMQ, Celery, Redis, REST APIs, WebSockets
Databases: PostgreSQL (+ pgvector), MongoDB, Convex
Cloud & DevOps: AWS, Cloudflare R2, Git, GitHub, macOS Distribution (notarisation, code signing)
AI / ML: TensorFlow, RAG Pipelines, BM25, Reciprocal Rank Fusion, LLM Evaluation, Agentic Workflows, Behavioral Memory, Multi-modal AI, Hallucination Detection, OpenRouter, Anthropic Claude, OpenAI GPT, Gemini
