Summary

Final-year Computer Science student (9.08 CGPA), Pune-based, with strong CS fundamentals and hands-on engineering in **C++, Java, and Python**. Built and shipped full-stack products end to end, from data pipelines to automated test harnesses. Comfortable reading unfamiliar codebases, debugging on Linux, and building tooling that removes manual work. Passionate gamer with hands-on **Godot** game-development experience, eager to contribute to Ubisoft Pune's mobile and console titles — in gameplay/tools engineering or test automation — and to learn from one of India's oldest game studios.

Education

•Bachelor of Technology in Computer Science *Nov 2022 – Jun 2026*
Pimpri Chinchwad College of Engineering, Savitribai Phule Pune University CGPA: 9.08 (up to 7th semester)

– Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Computer Networks, DBMS, Machine Learning

Experience

•Stride — Adaptive Wellness Platform *April 2026 – Present*
Founder & Lead Engineer Remote

– Built and shipped a full product solo, owning everything from backend services to UI — demonstrating end-to-end ownership and fast iteration on real user feedback.
– Designed a system that turns messy, unstructured input (text and voice) into clean structured data, handling edge cases and failure modes gracefully.
– Integrated multiple external APIs with retries and error handling, keeping the app stable under real-world failures.

Engineering Projects

•Lore Engine — *Full-Stack Content Pipeline with Automated Test Harness* *2026 – Present*
Python, FastAPI, PostgreSQL, Celery, Redis, Next.js

– Built a pipeline processing **6,000+ pages** of content into a searchable store — validated end-to-end against a Harry Potter wiki dataset.
– Engineered an **automated QA / regression harness** (50-question ground-truth suite) that gates every deploy and catches correctness regressions automatically — the same test-automation mindset Ubisoft's QC teams rely on.
– Owned the full stack (backend workers, database, frontend) and debugged across services on **Linux** using logs and process tooling.

•PromptForge — *Concurrent Async Job Processing Backend* *Jan 2026 – Feb 2026*
Node.js, Express.js, BullMQ, Redis, Convex, React.js

– Built a **concurrent job-processing backend** (worker queue on Redis, retries, durable persistence) that runs many tasks reliably in parallel without losing work on failures.
– Designed a versioned system comparing **latency, cost, and output quality** across providers — practicing objective, measurement-driven engineering.
– Wrote clean REST APIs and structured error handling for safe reprocessing of failed jobs.

Technical Skills

Languages: C++, Java, Python, JavaScript, TypeScript, SQL
CS Fundamentals: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Computer Networks, DBMS
Engineering: Full-stack development, REST APIs, concurrent/async job processing, automated testing & QA harnesses, debugging
Linux & Tools: Linux/Unix, Bash, Git, GitHub, log-driven debugging
Backend: FastAPI, Node.js, Express.js, Redis, BullMQ, Celery, WebSockets
Frontend: React.js, Next.js, Tailwind CSS, HTML, CSS
Databases: PostgreSQL, MongoDB, SQL query design
