Summary

Final-year Computer Science student (9.08 CGPA) building full-stack products across responsive interfaces, backend APIs, and database-backed systems. Shipped Stride to production as sole engineer, owning product architecture and iterative delivery with an early private user cohort. Built Lore Engine, a full-stack RAG application with a Next.js frontend, FastAPI backend, PostgreSQL/pgvector data layer, and deploy-gated retrieval evaluation over 6,000+ wiki pages. Delivered StockXpert, a Next.js and FastAPI trading dashboard with live screening and alerts across 100 Nifty NSE equities. Proficient in Python, TypeScript, React.js, Next.js, FastAPI, Node.js, SQL, REST APIs, and Git.

Education

•Bachelor of Technology in Computer Science *Nov 2022 – Jun 2026*
Pimpri Chinchwad College of Engineering, Savitribai Phule Pune University CGPA: 9.08 (up to 7th semester)

– Relevant Coursework: Machine Learning, Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks, Object-Oriented Programming

•Higher Secondary Certificate *Jun 2022*
Shri Mhalsakant Junior College, Maharashtra State Board Score: 89.17%

Experience

•Stride — AI-First Adaptive Wellness Platform *April 2026 – Present*
Founder & Lead Engineer Remote

– Architected and shipped Stride to production as sole engineer, owning the full stack across frontend, backend APIs, business logic, and data layers for an early private user cohort.
– Architected a six-layer AI-first system spanning multi-modal input capture, behavioral memory, structured extraction, five specialised domain agents, analytics, and adaptive UX.
– Separated LLM understanding from a deterministic four-component calculator covering BMR, NEAT, EAT, and TEF to eliminate opaque arithmetic errors.
– Built natural-language workout parsing that converts free text into structured sets, reps, duration, and MET values without rigid input templates.
– Selected Convex for real-time reactive state over REST + WebSockets and OpenRouter for multi-provider LLM routing across five concurrent agent types.

Engineering Projects

•Lore Engine — *RAG Platform for Fan Wiki Knowledge Bases* *May 2026 – Present*
Next.js, FastAPI, PostgreSQL, pgvector, BM25, Celery, Redis, Cloudflare R2, REST APIs

– Built a full-stack web application with a Next.js frontend consuming REST APIs from a FastAPI backend, ingesting **6,000+ MediaWiki pages** per series into hybrid BM25 and pgvector retrieval.
– Designed section-aware H2/H3 chunking with enriched series, page, and section metadata, plus spoiler tags filtered at retrieval time.
– Built an async ingestion pipeline with Celery, Redis, and Cloudflare R2 that fetches MediaWiki pages, converts wikitext to markdown, and persists metadata in PostgreSQL.
– Established a **50-question per-series ground-truth eval harness** measuring retrieval MRR and end-to-end answer accuracy, gating every deploy.

•StockXpert — *AI-Powered Deep Learning Equity Prediction Platform* *Jan 2026 – May 2026*
Python, TensorFlow, FastAPI, Next.js, TypeScript, Tailwind CSS, Cloudflare R2, AWS

– Delivered a full-stack trading dashboard with Next.js, FastAPI, live stock screening, real-time alerts, and OHLCV candlestick charts across all **100 Nifty NSE equities**.
– Constructed a leakage-free feature pipeline from raw OHLCV data with strict temporal train, validation, and test splits to prevent lookahead bias.
– Built a deep learning prediction layer combining ResNet, GRU, Bi-LSTM, and multi-head attention, achieving a **12% improvement in short-horizon return correlation** over baseline.
– Built a snapshot-first serving layer with market-aware TTL caching, delivering **sub-second API latency** across all 100 Nifty stocks during market hours.

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, C++, Java
Frontend: React.js, Next.js, Tailwind CSS, HTML, CSS, Electron
Backend: FastAPI, Node.js, Express.js, REST APIs, BullMQ, Celery, Redis, WebSockets
Databases: PostgreSQL (+ pgvector), MongoDB, Convex
Cloud & DevOps: AWS, Cloudflare R2, Git, GitHub, Agile/SDLC
AI / ML: TensorFlow, RAG Pipelines, Agentic Workflows, LLM Evaluation, OpenRouter
