Summary

Final-year Computer Science student (9.08 CGPA) who builds production-grade AI software end to end. Designed multi-agent LLM pipelines with prompt orchestration, guardrails, and cross-model routing, and a hybrid RAG retrieval system (BM25 + pgvector with reciprocal rank fusion) over 6,000+ pages. Strong in Python, React.js, FastAPI, and reliable, monitored AI systems built to operate at scale, not just in notebooks.

Education

•Bachelor of Technology in Computer Science *Nov 2022 – Jun 2026*
Pimpri Chinchwad College of Engineering, Savitribai Phule Pune University CGPA: 9.08 (up to 7th semester)

– Relevant Coursework: Machine Learning, Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks, Object-Oriented Programming

Projects

•StockXpert — *AI-Powered Deep Learning Equity Prediction Platform* *Nov 2025 – Present*
Python, TensorFlow, FastAPI, Next.js, TypeScript, Cloudflare R2, AWS

– Built a leakage-free Python ML pipeline and hierarchical deep-learning model (ResNet, GRU, Bi-LSTM, multi-head attention) across all **100 Nifty NSE equities**, improving short-horizon return correlation **12%** over baseline.
– Engineered a multi-objective Huber loss with directional regularisation and tail-event oversampling, reducing directional error on high-volatility equities while preventing lookahead bias via strict temporal splits.
– Shipped a monitored FastAPI serving layer with snapshot-first R2 caching, delivering **sub-second latency across all 100 stocks** during market hours and eliminating redundant inference cost.

•GovBench — *Open-Source LLM Governance, Reliability & Guardrail Evaluation* *Mar 2026 – Present*
Python, LLM Evaluation Pipelines, Adversarial Testing, Hallucination Detection, AI Safety

– Open-sourced an LLM evaluation framework testing model reliability across **6 pillars** and **12 identity variants**, run in baseline, pressure, and adversarial stress modes to surface failures standard benchmarks miss.
– Evaluated 4 production LLMs (Claude, Gemini, DeepSeek, GPT-OSS), exposing concrete guardrail gaps (minority protection **63%**, jurisdictional awareness **56.7%**) with top models scoring **90%+**.
– Automated a scoring pipeline (sentiment variance, position-drift tracking, hallucination detection) that emits deployment-readiness grades and runs unattended on each new model release.

•PromptForge — *Agentic Multi-Agent Prompt Engineering & Orchestration Platform* *Jan 2026 – Feb 2026*
Node.js, Express.js, BullMQ, Convex, OpenRouter, React.js

– Architected a creator–critic–evaluator **multi-agent** pipeline that iteratively improves prompts, scoring clarity, constraint coverage, and token efficiency across versioned, regression-tracked revision trails.
– Implemented cross-model LLM orchestration and routing across OpenAI, Anthropic, Gemini, and open models via OpenRouter, enabling objective quality, latency, and cost-per-output benchmarking for model selection.
– Built a fault-tolerant async backend (BullMQ workers, idempotent retries, Convex persistence) and a React.js review UI, sustaining reliable prompt regression testing without job loss on provider timeouts.

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, C++, Java
AI / ML: Multi-Agent Systems, LLM Orchestration, Prompt Engineering, RAG Pipelines, Vector Search (pgvector, BM25, Reciprocal Rank Fusion), LLM Evaluation, Guardrails, Hallucination Detection, TensorFlow, XGBoost, OpenRouter
LLM Providers: Anthropic Claude, OpenAI GPT, Gemini, Groq
Backend: FastAPI, Node.js, Express.js, BullMQ, Celery, Redis, REST APIs, WebSockets, Microservices
Frontend: React.js, Next.js, Tailwind CSS, HTML, CSS
Databases: PostgreSQL (+ pgvector), MongoDB, Convex
Cloud & Tooling: AWS, Cloudflare R2, Git, GitHub, CI-style eval gating, async job pipelines
System Design: Multi-agent coordination, hybrid retrieval, event-driven and async architectures, snapshot-first serving, monitoring and guardrails
