Summary

Final-year CS student (9.08 CGPA, PCCOE) who builds agentic LLM systems end to end: a creator–critic–evaluator multi-agent pipeline with cross-model orchestration and regression-tracked prompts, an adversarial LLM evaluation benchmark with automated guardrail scoring, and a hybrid BM25 + pgvector RAG platform over 6,000+ documents. Strong in Python, Node.js, and React, with a focus on reliable, monitored multi-agent workflows. Looking to architect agentic AI systems that run in production from day one.

Education

Bachelor of Technology in Computer Science *Nov 2022 – Jun 2026*
Pimpri Chinchwad College of Engineering, Savitribai Phule Pune University CGPA: 9.08 (up to 7th semester)

- Relevant Coursework: Machine Learning, Deep Learning, NLP, Data Structures & Algorithms, Database Systems, Operating Systems

Engineering Experience

PromptForge

Jan 2026 – Feb 2026
Agentic AI Tooling | Node.js, Express.js, BullMQ, Convex, OpenRouter, React.js GitHub

- Architected a creator–critic–evaluator **multi-agent** pipeline for iterative prompt improvement, scoring clarity, completeness, constraint coverage, and token efficiency across versioned, regression-tracked revision trails — treating prompts as testable, deployable artifacts.
- Implemented cross-model LLM orchestration and routing across OpenAI, Anthropic, Gemini, and open-source models via OpenRouter, enabling objective quality, latency, and cost-per-output comparisons for data-driven model selection.
- Built a fault-tolerant async backend with BullMQ workers, idempotent retries, and Convex persistence, sustaining reliable prompt regression testing at scale without job loss on LLM provider timeouts.
- Emitted structured prompt outputs with metadata — token budget, latency profile, expected output shape, and version changelog — so prompts can be reviewed, diffed, and deployed like code.

GovBench

Mar 2026 – Present
AI Safety Research | Python, LLM Evaluation Pipelines, Prompt Engineering, Sentiment & Hallucination Detection GitHub Live

- Designed and open-sourced an LLM evaluation framework assessing model readiness for judicial and governmental deployment across **6 pillars**: demographic bias, procedural integrity, corruption resistance, jurisdictional awareness, transparency, and minority protection — pillars chosen because MMLU-style benchmarks expose none of these failure modes.
- Implemented controlled demographic isolation testing across **12 identity variants** per scenario with naturalistic prompting, measuring inherent bias in bail, sentencing, welfare, and immigration decisions across **US, India, and EU** legal systems.
- Evaluated 4 production LLMs (Claude Sonnet, Gemini Flash, DeepSeek, GPT-4o) across baseline, pressure, and adversarial modes; top performers scored **90%**+ while exposing concrete failures — minority protection (GPT-4o: **63%**), jurisdictional awareness (DeepSeek: **56.7%**).
- Built an automated scoring pipeline combining sentiment variance analysis, position drift tracking, and hallucination detection to generate composite deployment-readiness grades, enabling unattended evaluation on new model releases.

StockXpert

Nov 2025 – Present
Independent Research Project | Python, TensorFlow, FastAPI, Next.js, TypeScript, Tailwind CSS, Cloudflare R2 GitHub Live

- Architected a hierarchical deep learning system combining ResNet, GRU, Bi-LSTM, and multi-head attention across all **100 Nifty NSE equities**; achieved a **12% improvement in short-horizon return correlation** over single-architecture baselines.
- Constructed a leakage-free feature pipeline with strict temporal train/validation/test splits, enabling clean walk-forward validation with zero lookahead bias across the full 100-stock universe.
- Built a snapshot-first serving layer on Cloudflare R2 with market-aware TTL caching, delivering **sub-second API latency** during market hours while eliminating redundant inference cost.
- Delivered a full-stack trading dashboard (Next.js + FastAPI) with live screener, real-time alerts, candlestick charts, technical indicator overlays, and 1D–10D forecast tables with calibrated confidence scores.

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, C++, Java
Agentic / AI: Multi-Agent Systems, LLM Orchestration, Prompt Engineering, Cross-Model Routing, RAG Pipelines, pgvector, BM25/RRF, LLM Evaluation, Guardrails, OpenRouter
LLM Providers: Anthropic Claude, OpenAI GPT, Gemini, Groq, Deepgram, whisper.cpp
Backend: Node.js, Express.js, FastAPI, BullMQ, Celery, Redis, REST APIs
Frontend: React.js, Next.js, Tailwind CSS, HTML/CSS
Databases: PostgreSQL (+ pgvector), MongoDB, Convex
Cloud & DevOps: AWS, Cloudflare R2, Docker, Git, GitHub Actions (CI/CD)
