Summary

Final-year CS student (9.08 CGPA) building LLM-powered applications, RAG pipelines, and multi-agent AI systems using GPT, Claude, and Gemini. Shipped Stride to production (5–10 active users) — a multi-agent platform with five domain agents over behavioral memory and multi-provider LLM routing across Anthropic Claude, OpenAI GPT, and Gemini via OpenRouter. Built Lore Engine, a production RAG platform with hybrid BM25 + pgvector retrieval over 6,000+ pages and deploy-gated evaluation harnesses. Built PromptForge, a creator–critic–evaluator agentic pipeline with cross-provider benchmarking. Strong in Python, FastAPI, RAG, LangChain-equivalent architectures, and agentic AI.

Education

•Bachelor of Technology in Computer Science *Nov 2022 – Jun 2026*
Pimpri Chinchwad College of Engineering, Savitribai Phule Pune University CGPA: 9.08 (up to 7th semester)

– Relevant Coursework: Machine Learning, Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks, Object-Oriented Programming

Experience

•Stride — AI-First Adaptive Wellness Platform *April 2026 – Present*
Founder & Lead Engineer Remote

– Built and shipped Stride to production as sole engineer; running live with **5–10 active trial users** driving iterative product feedback.
– Architected five specialised domain agents (diet, workout, sleep, hydration, habits) sharing a behavioral memory layer — demonstrating multi-agent coordination with stateful context management across conversation turns.
– Integrated GPT, Claude, and Gemini via OpenRouter for multi-provider LLM routing, with NLU extraction from multi-modal input (text, voice, image, barcode) — architecture directly applicable to enterprise AI chatbot development.

Engineering Projects

•Lore Engine — *Production RAG Platform with Hybrid Retrieval and Evaluation* *2026 – Present*
Next.js, FastAPI, PostgreSQL, pgvector, BM25, Celery, Redis, Cloudflare R2, OpenAI, Anthropic Claude

– Architected a full-stack RAG application ingesting **6,000+ MediaWiki pages** into a hybrid retrieval pipeline (BM25 + pgvector via reciprocal rank fusion) — mirroring enterprise RAG pipeline design with proper-noun disambiguation that pure vector search misses.
– Built an async ingestion pipeline (Celery, Redis, Cloudflare R2/S3) fetching from the MediaWiki API, converting wikitext to structured markdown, and persisting metadata in PostgreSQL — scalable to **∼5M vectors per series**.
– Established a **50-question per-series ground-truth eval harness** measuring retrieval MRR and end-to-end answer accuracy, gating every deployment.
– Shipped two distinct AI surfaces on a shared retriever: a streaming chat with inline citations and a hierarchically generated reference book — demonstrating end-to-end generative AI application development.

•PromptForge — *Agentic Multi-Agent Pipeline with Multi-Provider LLM Benchmarking* *Jan 2026 – Feb 2026*
Node.js, Express.js, BullMQ, Convex, OpenRouter, React.js

– Architected a creator–critic–evaluator agentic pipeline for iterative prompt improvement, scoring clarity, completeness, constraint coverage, and token efficiency across versioned revision trails.
– Implemented cross-model routing across OpenAI GPT, Anthropic Claude, Gemini, and open-source models via OpenRouter, enabling objective quality, latency, and cost-per-output comparisons for model selection.
– Built a fault-tolerant async backend (BullMQ workers, idempotent retries, Convex persistence) sustaining reliable prompt regression testing without job loss on LLM provider timeouts.

Technical Skills

AI / ML: RAG Pipelines, Multi-Agent Systems, LLM Integration, Agentic Workflows, pgvector, BM25, Reciprocal Rank Fusion, Prompt Engineering, Behavioral Memory, LLM Evaluation, TensorFlow, OpenRouter
LLM Providers: Anthropic Claude, OpenAI GPT, Gemini, Groq, Deepgram Nova-2
Languages: Python, TypeScript, JavaScript, SQL, C++, Java
Backend: FastAPI, Node.js, Express.js, BullMQ, Celery, Redis, REST APIs, WebSockets
Frontend: React.js, Next.js, Tailwind CSS, HTML, CSS
Databases: PostgreSQL (+ pgvector), MongoDB, Convex
Cloud & DevOps: AWS, Cloudflare R2, Git, GitHub, async job pipelines
System Design: Multi-agent coordination, hybrid retrieval, event-driven architecture, snapshot-first serving
