Summary

Final-year Computer Science student with a 9.08 CGPA and hands-on experience building resilient software systems, developer tooling, and AI applications. Shipped Stride to production as a sole engineer and built Lore Engine, a full-stack RAG platform with hybrid retrieval, asynchronous ingestion, and deploy-gated evaluation. Open-sourced GovBench, an automated LLM governance benchmark across legal systems. Proficient in Python, JavaScript, TypeScript, React, Next.js, FastAPI, Node.js, PostgreSQL, Git, and event-driven systems.

Education

•Bachelor of Technology in Computer Science *Nov 2022 – Jun 2026*
Pimpri Chinchwad College of Engineering, Savitribai Phule Pune University CGPA: 9.08 (up to 7th semester)

– Relevant Coursework: Machine Learning, Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks, Object-Oriented Programming

•Higher Secondary Certificate *Jun 2022*
Shri Mhalsakant Junior College, Maharashtra State Board Score: 89.17%

Experience

•Stride — AI-First Adaptive Wellness Platform *April 2026 – Present*
Founder & Lead Engineer Remote

– Architected and shipped Stride to production as sole engineer, running live with an early private user cohort driving iterative product feedback.
– Architected a six-layer AI-first system with multi-modal input, behavioral memory, structured extraction, five specialised domain agents, analytics, and adaptive UX.
– Separated LLM understanding from a deterministic four-component calculator (BMR, NEAT, EAT, TEF), eliminating opaque LLM arithmetic errors.
– Built natural-language workout parsing that converts free text into structured sets, reps, duration, and MET values without rigid input templates.
– Selected Convex for real-time reactive state over REST + WebSockets and OpenRouter for multi-provider LLM routing across five concurrent agent types.

Engineering Projects

•Lore Engine — *RAG Platform for Fan Wiki Knowledge Bases* *May 2026 – Present*
Next.js, FastAPI, PostgreSQL, pgvector, BM25, Celery, Redis, Cloudflare R2, REST APIs

– Architected a full-stack RAG application ingesting **6,000+ MediaWiki pages** per series into hybrid BM25 and pgvector retrieval via reciprocal rank fusion.
– Designed section-aware chunking at H2/H3 wiki boundaries with enriched metadata per chunk and spoiler tags filtered at retrieval time.
– Designed an async ingestion pipeline using Celery, Redis, and Cloudflare R2 that fetches MediaWiki pages, converts wikitext to markdown, and persists PostgreSQL metadata.
– Established a 50-question per-series ground-truth evaluation harness measuring retrieval and end-to-end answer accuracy, gating every deploy.

•GovBench — *Open-Source LLM Governance Framework* *Mar 2026 – Present*
Python, LLM Evaluation Pipelines, Hallucination Detection, Adversarial Testing, AI Safety

– Designed and open-sourced an LLM evaluation framework assessing readiness for judicial and governmental deployment across 6 pillars.
– Implemented controlled demographic isolation testing across **12 identity variants** per scenario across US, India, and EU legal systems.
– Evaluated 4 production LLMs across baseline, pressure, and adversarial stress modes, revealing concrete failures in minority protection and jurisdictional awareness.
– Built an automated scoring pipeline combining sentiment variance analysis, position drift tracking, and hallucination detection to emit deployment-readiness grades.

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, C++, Java
Frontend: React.js, Next.js, Tailwind CSS, HTML, CSS
Backend: FastAPI, Node.js, Express.js, BullMQ, Celery, Redis, REST APIs, WebSockets
Databases: PostgreSQL (+ pgvector), MongoDB, Convex
Cloud & DevOps: AWS, Cloudflare R2, Git, GitHub
AI/ML & Systems: TensorFlow, RAG Pipelines, LLM Evaluation, Agentic Workflows, Adversarial Testing, Event-driven architecture, async job pipelines
