Summary

Final-year Computer Science student (9.08 CGPA) building applied AI systems across agentic workflows, retrieval, evaluation, and full-stack delivery. Architected StockXpert, a hierarchical deep learning equity prediction platform achieving a 12% improvement in short-horizon return correlation across all 100 Nifty NSE equities. Built Lore Engine, a production RAG platform with hybrid BM25 and pgvector retrieval over 6,000+ wiki pages and deploy-gated evaluation. Shipping Stride as Founder & Lead Engineer, with multi-modal input, behavioral memory, and five specialised domain agents. Proficient in Python, TypeScript, FastAPI, React, Next.js, TensorFlow, RAG architectures, LLM evaluation, and agentic workflows.

Education

•Bachelor of Technology in Computer Science *Nov 2022 – Jun 2026*
Pimpri Chinchwad College of Engineering, Savitribai Phule Pune University CGPA: 9.08 (up to 7th semester)

– Relevant Coursework: Machine Learning, Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks, Object-Oriented Programming

•Higher Secondary Certificate *Jun 2022*
Shri Mhalsakant Junior College, Maharashtra State Board Score: 89.17%

Experience

•Stride — AI-First Adaptive Wellness Platform *April 2026 – Present*
Founder & Lead Engineer Remote

– Architected and shipped Stride to production as sole engineer, running live with an early private user cohort actively driving iterative product feedback ahead of public beta.
– Architected a six-layer AI-first system with multi-modal input capture, behavioral memory, natural-language extraction, five specialised domain agents, analytics, and adaptive UX.
– Separated LLM understanding and intent extraction from a deterministic four-component calculator (BMR, NEAT, EAT, TEF), eliminating opaque LLM arithmetic errors.
– Selected Convex for real-time reactive state and OpenRouter for multi-provider LLM routing across five concurrent agent types.

Engineering Projects

•StockXpert — *AI-Powered Deep Learning Equity Prediction Platform* *Jan 2026 – May 2026*
Python, TensorFlow, FastAPI, Next.js, TypeScript, Tailwind CSS, Cloudflare R2, AWS

– Architected a hierarchical deep learning system combining ResNet, GRU, Bi-LSTM, and multi-head attention to model cross-horizon price dependencies across all 100 Nifty NSE equities.
– Designed a multi-objective Huber loss with directional regularisation and tail-event oversampling, achieving a 12% improvement in short-horizon return correlation over baseline.
– Built a snapshot-first serving layer on Cloudflare R2 with market-aware TTL caching, delivering sub-second API latency across all 100 Nifty stocks during market hours.

•Lore Engine — *RAG Platform for Fan Wiki Knowledge Bases* *May 2026 – Present*
Next.js, FastAPI, PostgreSQL, pgvector, BM25, Celery, Redis, Cloudflare R2, OpenAI, Anthropic Claude

– Architected a full-stack RAG application ingesting 6,000+ MediaWiki pages per series into hybrid BM25 and pgvector retrieval via reciprocal rank fusion.
– Designed an async ingestion pipeline using Celery, Redis, and Cloudflare R2/S3 to fetch, transform, store, and persist wiki data.
– Established a 50-question per-series ground-truth eval harness measuring retrieval MRR and end-to-end answer accuracy, gating every deploy.

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, C++, Java
Frontend: React.js, Next.js, Tailwind CSS, HTML, CSS
Backend: FastAPI, Node.js, Express.js, BullMQ, Celery, Redis, REST APIs, WebSockets
AI / ML: RAG Pipelines, pgvector, BM25, Reciprocal Rank Fusion, LLM Evaluation, Agentic Workflows, Behavioral Memory, Multi-modal AI, Hallucination Detection, TensorFlow, OpenRouter
LLM Providers: Anthropic Claude, OpenAI GPT, Gemini, Groq, Deepgram Nova-2, whisper.cpp (local)
Databases: PostgreSQL (+ pgvector), MongoDB, Convex
Cloud & DevOps: AWS, Cloudflare R2, Git, GitHub
