Summary

Final-year Computer Science student (9.08 CGPA) with backend engineering experience across production systems, REST APIs, asynchronous data pipelines, and database-backed applications. Built Lore Engine, a RAG platform ingesting 6,000+ wiki pages through Celery and Redis into PostgreSQL, with deploy-gated retrieval evaluation and caching. Built PromptForge, an agentic backend with BullMQ workers, idempotent retries, and Convex persistence for reliable prompt regression testing across model providers. Shipping Stride as Founder & Lead Engineer, with end-to-end ownership of a production system. Proficient in Python, FastAPI, Node.js, SQL, PostgreSQL, Redis, cloud storage, and event-driven system design.

Education

•Bachelor of Technology in Computer Science *Nov 2022 – Jun 2026*
Pimpri Chinchwad College of Engineering, Savitribai Phule Pune University CGPA: 9.08 (up to 7th semester)

– Relevant Coursework: Machine Learning, Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks, Object-Oriented Programming

•Higher Secondary Certificate *Jun 2022*
Shri Mhalsakant Junior College, Maharashtra State Board Score: 89.17%

Experience

•Stride — AI-First Adaptive Wellness Platform *April 2026 – Present*
Founder & Lead Engineer Remote

– Architected and shipped Stride to production as sole engineer, running live with an early private user cohort driving iterative product feedback ahead of public beta.
– Architected a six-layer AI-first system with multi-modal input capture, behavioral memory, structured extraction, five specialised domain agents, analytics, and adaptive UX driven by behavioral signals.
– Separated LLM understanding from deterministic computation with a four-component calculator for BMR, NEAT, EAT, and TEF, eliminating opaque LLM arithmetic errors.
– Built natural-language workout parsing that converts free text into structured sets, reps, duration, and MET values without rigid input templates.
– Selected Convex for real-time reactive state over REST + WebSockets and OpenRouter for multi-provider LLM routing across five concurrent agent types.

Engineering Projects

•Lore Engine — *RAG Platform for Fan Wiki Knowledge Bases* *May 2026 – Present*
Next.js, FastAPI, PostgreSQL, pgvector, BM25, Celery, Redis, Cloudflare R2, REST APIs

– Architected a full-stack RAG application ingesting **6,000+ MediaWiki pages** per series into a hybrid BM25 and pgvector retrieval pipeline using reciprocal rank fusion.
– Designed section-aware chunking with enriched [Series][Page][Section] metadata and ingestion-time spoiler tags filtered during retrieval.
– Designed an async ingestion pipeline with Celery workers, Redis, and Cloudflare R2 that fetches MediaWiki pages, converts wikitext to structured markdown, and persists metadata in PostgreSQL.
– Established a **50-question per-series ground-truth eval harness** measuring retrieval MRR and end-to-end answer accuracy, gating every deploy.

•PromptForge — *Agentic Prompt Engineering & Benchmarking Platform* *Jan 2026 – Feb 2026*
Node.js, Express.js, BullMQ, Convex, OpenRouter, React.js

– Architected a creator, critic, and evaluator agentic pipeline for iterative prompt improvement across versioned revision trails.
– Implemented cross-model routing and benchmarking across OpenAI, Anthropic, Gemini, and open-source models via OpenRouter, comparing quality, latency, and cost per output.
– Built a fault-tolerant async backend using BullMQ workers with idempotent retries and Convex persistence, supporting reliable prompt regression testing without job loss on provider timeouts.
– Emitted structured prompt outputs with token budget, latency profile, expected output shape, and version changelog metadata.

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, C++, Java
Backend: FastAPI, Node.js, Express.js, REST APIs, BullMQ, Celery, Redis, WebSockets
Databases: PostgreSQL (+ pgvector), MongoDB, Convex
Cloud & DevOps: AWS, Cloudflare R2, Git, GitHub
AI / ML: TensorFlow, RAG Pipelines, LLM Evaluation, Agentic Workflows, OpenRouter
System Design: Event-driven architecture, async job pipelines, snapshot-first serving, hybrid retrieval, multi-agent coordination
