## Summary

Final-year Computer Science student (9.08 CGPA) with full-stack project experience across responsive frontend interfaces, backend APIs, and database-backed systems. Built Lore Engine, a production RAG platform with a Next.js frontend, FastAPI backend, and PostgreSQL/pgvector data layer serving 6,000+ wiki pages through REST APIs. Delivered StockXpert, a full-stack Next.js and FastAPI trading dashboard with live screening and alerts across 100 Nifty NSE equities. Shipping Stride end to end as Founder & Lead Engineer. Comfortable across Python, TypeScript, JavaScript, React.js, Next.js, FastAPI, Node.js, SQL, REST APIs, and Git.

## Education

**•Bachelor of Technology in Computer Science** *Nov 2022 – Jun 2026*
*Pimpri Chinchwad College of Engineering, Savitribai Phule Pune University* CGPA: 9.08 (up to 7th semester)
– Relevant Coursework: Machine Learning, Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks, Object-Oriented Programming

**•Higher Secondary Certificate** *Jun 2022*
*Shri Mhalsakant Junior College, Maharashtra State Board* Score: 89.17%

## Experience

**•Stride — AI-First Adaptive Wellness Platform** *April 2026 – Present*
*Founder & Lead Engineer* Remote
– Architected and shipped Stride to production as sole engineer, owning the full stack: responsive frontend, backend APIs and business logic, and a database-backed data layer, with an early private user cohort driving iterative product feedback.
– Built REST APIs and business logic integrating third-party LLM providers via OpenRouter, separating a deterministic four-component calculator (BMR, NEAT, EAT, TEF) from LLM reasoning to eliminate opaque arithmetic errors.
– Built natural-language workout parsing that converts free text such as "30 min run, 3x10 squats at 60kg" into structured sets, reps, and duration values, integrated with the frontend and backing database.
– Selected Convex for real-time reactive state over a REST + WebSockets stack, keeping frontend and backend in sync across concurrent agent types without manual polling logic.
– Iterated solo across frontend, backend, and data layers with no dedicated QA or operations support while shipping the product from concept to distributable release.

## Engineering Projects

**•Lore Engine** — *RAG Platform for Fan Wiki Knowledge Bases* *May 2026 – Present*
*Next.js, FastAPI, PostgreSQL, pgvector, BM25, Celery, Redis, Cloudflare R2, REST APIs*
– Built a full-stack web application with a Next.js frontend consuming REST APIs served by a FastAPI backend, ingesting **6,000+ MediaWiki pages** per series into a hybrid BM25 and pgvector retrieval pipeline.
– Designed section-aware chunking at H2/H3 wiki boundaries with enriched `[Series][Page][Section]` metadata per chunk for fine-grained context control over large knowledge bases.
– Built an async ingestion pipeline with Celery, Redis, and Cloudflare R2 that fetches MediaWiki pages, converts wikitext to markdown, and persists metadata in PostgreSQL.
– Established a **50-question per-series ground-truth eval harness** measuring retrieval accuracy end to end and gating every deploy.

**•StockXpert** — *AI-Powered Deep Learning Equity Prediction Platform* *Jan 2026 – May 2026*
*Python, TensorFlow, FastAPI, Next.js, TypeScript, Tailwind CSS, Cloudflare R2, AWS*
– Delivered a full-stack trading dashboard with a Next.js frontend, FastAPI backend, REST APIs, live stock screener, real-time alerts, and OHLCV candlestick charts across all **100 Nifty NSE equities**.
– Constructed a leakage-free feature pipeline from raw OHLCV data with strict temporal train, validation, and test splits to prevent lookahead bias.
– Built the deep learning prediction layer using ResNet, GRU, Bi-LSTM, and attention, achieving a **12% improvement in short-horizon return correlation** over baseline.
– Built a snapshot-first serving layer with market-aware TTL caching, delivering **sub-second API latency** across all 100 Nifty stocks during market hours.

## Technical Skills

**Languages**: Python, TypeScript, JavaScript, SQL, C++, Java
**Frontend**: React.js, Next.js, Tailwind CSS, HTML, CSS
**Backend**: FastAPI, Node.js, Express.js, REST APIs, BullMQ, Celery, Redis, WebSockets
**Databases**: PostgreSQL (+ pgvector), MongoDB, Convex
**Cloud & DevOps**: AWS, Cloudflare R2, Git, GitHub
**AI / ML**: TensorFlow, RAG Pipelines, Agentic Workflows, LLM Evaluation
